

BRYAN LUISE F. REAMILLO

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

Bacoor City, Cavite | bryanreamillo2403@gmail.com | <https://github.com/Bleu24>

EDUCATION

Bachelor of Science in Computer Science, Mapua University

Aug 2022 - May 2026

- Dean's Lister (1st Term A.Y. 2022-2023, 3rd Term A.Y. 2022-2023, 4th Term A.Y. 2023-2024)

PROFESSIONAL EXPERIENCE

Northern California Nursing Academy, Daly City, California, USA

Oct 2024 - Apr 2025

Quality Assurance Tester

- Tested multiple features of the company portal (e.g., admin controls) to ensure functionality, responsiveness, and overall system reliability.
- Ensured consistency and accuracy of data between sandbox and live environments, minimizing discrepancies and deployment risks
- Reported website bugs and errors through Jira, providing clear documentation to the lead developer and broader development team for timely resolution.
- Automated a large-scale verification task at the end of contract by using Puppeteer to scrape the portal and confirm that all student cards contained images (via detection of res.cloudinary links), significantly reducing manual checking time.
- Collaborated in daily stand-up meetings with the development team and Head of Information Technology, contributing QA insights to sprint planning and issue prioritization.

Skyline Summit Life Insurance Agency, Makati City, NCR, Philippines

June 2025 - Aug 2025

Intern

- Programmed full-stack features for web applications using React, Node.js, MongoDB, and Express.js with the help of AI tools to accelerate development and debugging.
- Developed a time-in/time-out (DTR) system to accurately log intern attendance, with AI assistance in the development process.
- Implemented a required-hours configuration for internship roles, ensuring interns render the correct number of hours as set by program guidelines.
- Built a recruitment tracker to monitor applicant status and streamline onboarding, with AI-assisted development support.
- Created a role-based view system where interns, managers, and admins shared the same page structure but were restricted to role-specific content and permissions.
- Designed a productivity KPI dashboard for Unit Managers, enabling tracking of team performance, summarizing sales and lapse data, and generating NAP reports.
- Integrated Gemini AI via API to parse and encode NAP reports automatically into structured tables, exportable in CSV format.
- Implemented secure authentication and authorization logic to enforce access control and protect system integrity.

Student Council at Mapua University, Makati City, NCR, Philippines

Aug 2023 - Aug 2024

Head of Creatives Committee

- Spearheaded the Creatives Committee, driving design and creative initiatives that elevated the impact of major university events and campaigns.
- Supervised and mentored a team of creatives, proactively ensuring timely delivery of high-quality outputs while fostering professional growth.
- Initiated cross-department collaborations to align creative strategies with broader project goals, strengthening cohesion and event success.
- Facilitated and directed brainstorming sessions, providing actionable feedback that encouraged innovation and empowered team members to contribute ideas confidently.

PROJECTS

Nimbus (Weather app)

Mar 2026

Vanilla JavaScript | <https://bleu24.github.io/Nimbus/>

- Engineered a weather application using vanilla JavaScript and **Webpack**, applying production-style build tooling, ES6 module architecture, and clean separation of concerns across feature modules.
- Integrated the Visual Crossing Weather API using `async/await`, implementing structured error handling to gracefully manage failed requests and edge-case responses.
- Built a location-aware search system combining browser Geolocation API with reverse geocoding, enabling the app to resolve a user's coordinates into a human-readable city name automatically.
- Managed API key security by leveraging Webpack's built-in environment variable support (dotenv integration), keeping sensitive credentials out of source code.
- Delivered dynamic UI updates through direct DOM manipulation without a framework.
- **Note:** Currently desktop-only. Responsive layout refactor using CSS Grid/Flexbox is a planned enhancement.

Memento (To-Do app)

Mar 2026

Vanilla JavaScript | <https://bleu24.github.io/Memento/>

- Engineered a full-stack To-Do application using vanilla JavaScript with Webpack bundling and ES6 modules, applying modern build tooling to a production-style project structure.
- Architected a custom **Publish/Subscribe (Pub/Sub) event system** from scratch, demonstrating applied knowledge of behavioral design patterns and decoupled component communication.
- Implemented persistent data storage using the Web Storage API (`localStorage`), enabling task and streak data to survive sessions without a backend.
- Built a daily streak and leveling system tied to task completion, implementing gamification logic that required stateful date comparison, cumulative progress tracking, and data persistence across sessions.
- Structured the codebase with modular ES6 imports/exports, separating concerns across feature modules for maintainability and scalability.
- **Note:** Currently desktop-only; responsive layout refactor (CSS Grid/Flexbox and viewport scaling) is a planned enhancement.

Simply Sushi (Landing page)

Oct 2025

Vanilla JavaScript | <https://bleu24.github.io/Simply-Sushi/>

- Developed a premium Japanese restaurant website using vanilla JavaScript, featuring a hero landing section, an about/story page, a menu page, and a contact form, delivering a cohesive and elegant dining experience online.
- Implemented **custom client-side page routing** from scratch, enabling seamless single-page navigation without a framework or library.
- Integrated **Framer Motion** for fluid page transitions and scroll-driven animations, elevating the visual presentation to match the premium aesthetic of the brand.
- Configured a Webpack dev/prod split build pipeline (`webpack.common.js`, `webpack.dev.js`, `webpack.prod.js`), separating development tooling from optimized production output.
- Structured the codebase using **ES6 modules** with clean imports/exports, keeping concerns separated and the project maintainable as it scaled across multiple pages.
- **Note:** Currently desktop-only (not responsive); planned enhancement includes responsive layout (grid/flex refactor, viewport scaling).

SKILLS

Technical

- Web Development: HTML5, CSS3, JavaScript (ES6+)
- Software Architecture patterns, SOLID principles, Object-Oriented Programming
- Version Control: Git (basic commands, branching, commits, merges)
- Project Management Tools: Jira (task tracking, bug reporting, sprint collaboration)

Professional

- Leadership & Collaboration: Led the Creatives Committee in Mapúa Student Council, managing projects and mentoring peers
- Debugging & Problem-Solving: Strong ability to identify, isolate, and resolve issues through structured testing and iteration
- Critical Thinking: Skilled at analyzing workflows and systems to propose effective, practical solutions
- Rigorous Curiosity: Continuously learning and exploring new concepts, technologies, and methods to improve development practices

ADDITIONAL INFORMATION

- **Languages:** English, Tagalog
- **Certifications:** Engineering Practices for Building Quality Software, Software Development Processes and Methodologies
